News Research Tool: Get instant insights from news articles

This tool is built using the Retrieval-Augmented Generation (RAG) framework, leveraging Google's Generative AI model Gemini-PRO. It fetches the content from a news article URL, processes it to create a searcha generates accurate answers to user queries. This advanced approach ensures high-quality, contextually relevant responses for an efficient and effective user experience.

How It Works

Follow these simple steps to interact with the tool:

1. **Enter Your API Key**: You'll need a Google API key for the tool to access Google's Generative AI models. Obtain your API key [here](#).

2. **Enter News URL**: Provide the URL of a news article to fetch and analyze its content.

3. **Ask a Question**: After processing the article, ask any question related to the content for a precise answer.

Enter your Google API Key:
